

Power BI Dashboard Build Guide

E-Commerce Data Analytics Internship Project

Import 01_Cleaned_Dataset.xlsx → Cleaned_Data into Power BI Desktop.

DAX Measures

Total Sales = SUM(Cleaned_Data[sales])

Total Profit = SUM(Cleaned_Data[profit])

Total Orders = DISTINCTCOUNT(Cleaned_Data[order_id])

Average Discount = AVERAGE(Cleaned_Data[discount])

Page 1 — Executive Overview

KPI Cards: Total Sales, Total Profit, Total Orders, Average Discount. Add supporting visuals for Sales by Region, Sales by Category, and Profit by Category.

Page 2 — Sales Analysis

Sales by Region; Sales by Market; Monthly Sales Trend; Category Performance.

Page 3 — Product & Customer Insights

Top Products; Top Customers; Profit by Sub-Category; Segment Analysis.

Required Dashboard Features

Add slicers/filters for Year, Market, Region, Category, Segment and Ship Mode. Ensure visuals interact with one another. Use KPI cards, consistent formatting and a consistent theme.

Important: A .pbix file must be saved from Power BI Desktop. This environment cannot create a native Power BI .pbix binary, so this guide provides the exact measures and page specification needed to finish that file.
